Monster Employment Index Sweden Drops in January, as Online Recruitment Activity Slows for First Time in Six Months

— Demand in Public Sector, Defence and Community Rises;
while all Other Sectors Decline —

— Blue- and White-collar Occupations see Similar Rates of
Decline in January —

STOCKHOLM, February 13, 2007 – Online job recruitment activity and related employment opportunities across Sweden declined in January after a period of steady increase seen at the end of 2006. The Index dropped nine points to 136 last month. Despite the decrease, the Index is still showing a significant year-on-year growth of 20 points.

Almost all industry sectors tracked by the Index exhibited decreases of varying degrees in online job availability, with the exception of the public, defence and community sector seeing an increase. The construction and extraction sector registered the smallest decline in January.

Demand for both blue- and white-collar workers saw similar slowdown in recruitment activity in January after rises in the second half of last year. The steepest decline was reported in the legislators, senior officials and managers category.

All regions tracked by the Index registered decreases, with Ostra Mellansverige showing the strongest rate of decline for the month.

Monster Employment Index Sweden results over the past 14 months are as follows:

Jan 07	Dec 06	Nov 06	Oct 06	Sep 06	Aug 06	Jul 06	Jun 06	May 06	Apr 06	Mar 06	Feb 06	Jan 06	Dec 05
136	145	138	131	123	112	116	129	117	119	117	111	116	109

“The Swedish economy continues to grow and there is still a positive outlook concerning employment in 2007. The dip of the Index in Sweden in January is consistent

with the rest of Europe, and it will be interesting to follow the development of the Index in the months to come,” said Henrik Ramstedt, Marketing director, Monster Scandinavia.

Majority of Industry Sectors Register Decreases of Varying Degrees in January

Most industry sectors tracked by the Index showed decreased online job demand during January.

The production, manufacturing, maintenance, repair sector saw a considerable drop in January. Decreases were registered in all categories with the exception of craft and related workers where demand increased for the eighth consecutive month. The sharpest drop was seen in the professionals category. Ostra Melansverige observed the steepest decline, while Vastsverige saw only a minor decrease. Despite the fall, this sector has seen a year-on-year growth of 40 points.

The number of online opportunities for workers in the transport, post and logistics sector also saw a dramatic decline in hiring last month, falling 22 points after a similar sized increase in December. The fall- in demand was seen across all categories, especially technicians, associate professionals and clerks. The year-on-year gain for this sector is now 25 points.

Online job availability in the sales sector declined for the second consecutive month following a strong increase in November. Demand declined across all categories with the exception of elementary occupations. Opportunities for clerks fell for the third consecutive month. The sharpest decrease was seen in the professionals category.

The public, defence and community sector saw the sharpest rate of growth in online job opportunities, rising 21 points after a relatively flat period. The rise was mostly due to stronger demand for professionals, while other categories registered a decline in demand. Opportunities grew across all regions. Year-on-year growth for the sector now stands at three points.

“The decline in the sales sector is to be expected after a seasonal spike in online job opportunities building up to the Christmas season. It follows that there will be a drop-off in these types of job offers at this time of year,” commented Ramstedt.

All Nine Occupational Categories Register Declines in January

After four months of strong increase in the legislators, senior officials and managers category, January registered a sharp decline in labour demand. The significant 27-point decrease was mainly due to a pull-back in hiring in the management and consulting sector. Demand dropped across all regions, especially Sydsverige Med Oarna and Vastsverige. Year-on-year growth is 58-points.

Opportunities for plant and machine operators and assemblers dropped by 10 points in January, following a rise of the same number during December 2006. This was mostly driven by a decrease in online job opportunities in the construction and extraction sector.

The professionals category declined eight points in January. The biggest drop in demand was seen in the education, training and library; production, manufacturing, maintenance and repair sectors. In contrast, demand in marketing, PR and media increased for the third consecutive month. Year-on-year growth in this category is 23-points.

Craft and related workers saw a decline in employment opportunities after four months of increases in hiring. The number of online offers in the construction and extraction sector fell for a second month, while increases were seen in the production, manufacturing, maintenance and repair sector for the eighth consecutive month. Demand declined across all regions with the exception of Sydsverige Med Oarna.

Occupation	Jan 07	Dec 06	Nov 06	Oct 06	Sep 06	Aug 06	Jul 06	Jun 06	May 06	Apr 06	Mar 06	Feb 06	Jan 06	Dec 05

All Swedish Regions See Declines in Online Recruitment Activity during January

All four Swedish regions tracked by the Index saw fewer online job opportunities in January, with Ostra Mellansverige registering the steepest decline. In this region, demand for all occupational categories decreased. The highest decline was observed in the plant and machine operators and assemblers category. While the public and telecommunications sectors saw increases, the sharpest decline was seen in the education, training and library sector. The year-on-year growth of the Index is 34 points.

Sydsverige Med Oarna saw a decrease of 12 points in January, with the steepest drop reported in Smaland Med Oarna sub-region. The drop in demand was almost entirely seen for white-collar occupations; while demand for blue-collar occupations only dropped for service, shop and market sales workers. Year-on-year growth in this region is 32 points.

In Vastsverige online job opportunities dropped eight points, yet remains at one of its highest levels. All categories saw declines in online recruitment activity. The highest decline was registered for legislators, senior officials and managers; elementary occupations; education training and library; and transport, post and logistics. In contrast, increases were seen in banking, finance, insurance; and hospitality and tourism. The yearly growth of the Index is 16 points.

Monster Employment Index Europe Declines in January, Reflecting Seasonal Slowdown in Online Recruitment Activity

The Monster Employment Index Europe declined in January, reflecting a similar seasonal pause in online recruitment activity seen at the same time last year. The Index dipped four points to a level of 122 – a smaller margin than the six-point drop in January 2006. Sharply reduced online job availability in France, the Netherlands, Sweden and the UK helped drive the Index down last month, while Germany registered a minor dip of just one point. Year-on-year, the Index is up 10 points, demonstrating solid growth over the past 12 months.

Most key sectors saw strong declines in January, with banking, finance and insurance showing the sharpest decrease. The only major sector that registered an increase in demand for workers was public, defence and community, which edged up mainly as a result of greater activity in France and Sweden.

Most occupational categories saw declines of varying degrees in January, with the exception of service shop and market sales workers, which do not normally see a peak at this time of year.

Monster Employment Index Europe results for the past 14 months are as follows:

Jan 07	Dec 06	Nov 06	Oct 06	Sep 06	Aug 06	Jul 06	Jun 06	May 06	Apr 06	Mar 06	Feb 06	Jan 06	Dec 05
122	126	125	126	124	126	125	121	116	116	117	116	106	112

Findings for the five countries tracked by the Monster Employment Index Europe for the past 14 months are as follows:

Country	Jan 07	Dec 06	Nov 06	Oct 06	Sep 06	Aug 06	Jul 06	Jun 06	May 06	Apr 06	Mar 06	Feb 06	Jan 06	Dec 05
